

Our Proposal:

Project Title: Filmz & Feast

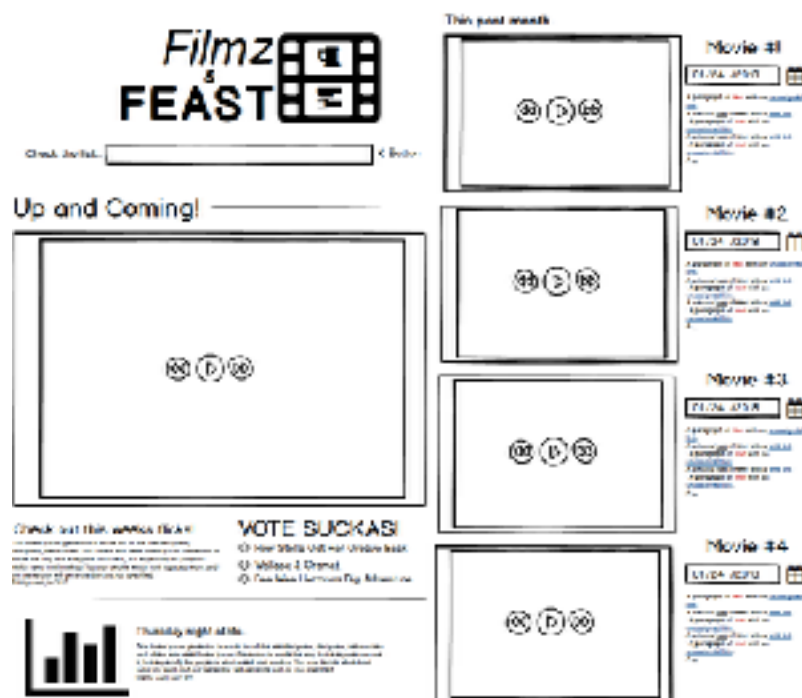

Team members: Eric Traband, Max Adams, Joy Hollela, Jerridd Speidel

Project Description:

Background: Idea was brought up by one of the team members. Friends get together every 2 weeks to have dinner and a movie and we'd like a better way to track which films were watched on what dates and who was hosting.

The App will display a search function, last 5 films, an add film function and stats on the database. There will also be a google calendar link with the hosting order.

Sketch of Final Product:

APIs to be Used:

- Firebase
- MovieDataBase API
- Google Calendar API

Rough Breakdown of Tasks:

- We broke down the project into starter UI and Backend tasks on Trello Boards
